

# New year New Award

## Jaama named 'Fleet Software Specialist' for the 2nd year

An outstanding reputation for quality, value, technology and passion sees Jaama receive their 3rd award from the ITM in as many years.

By working with the industries largest and best known organisations, Jaama address the wide ranging and often complex requirements of vehicle fleet operators or vehicle management companies and as a result have developed the most technologically advanced and functionally rich software available for fleet operators.

Jaama, by building on its vast experience, has brought for the first time fleet, leasing and rental software together with practical health and safety advice in one innovative solution.

This technology enables fleet decision makers to monitor, measure, compare and contrast the performance of individual drivers and vehicles more effectively, control costs, proactively manage duty of care and be more strategic in their thinking and less process driven.

It is for these reasons Jaama has been named 'Fleet Software Specialist' by the ITM, for the second year in a row, after being labelled 'the one to watch' in 2005.
