

## Jaama win new award

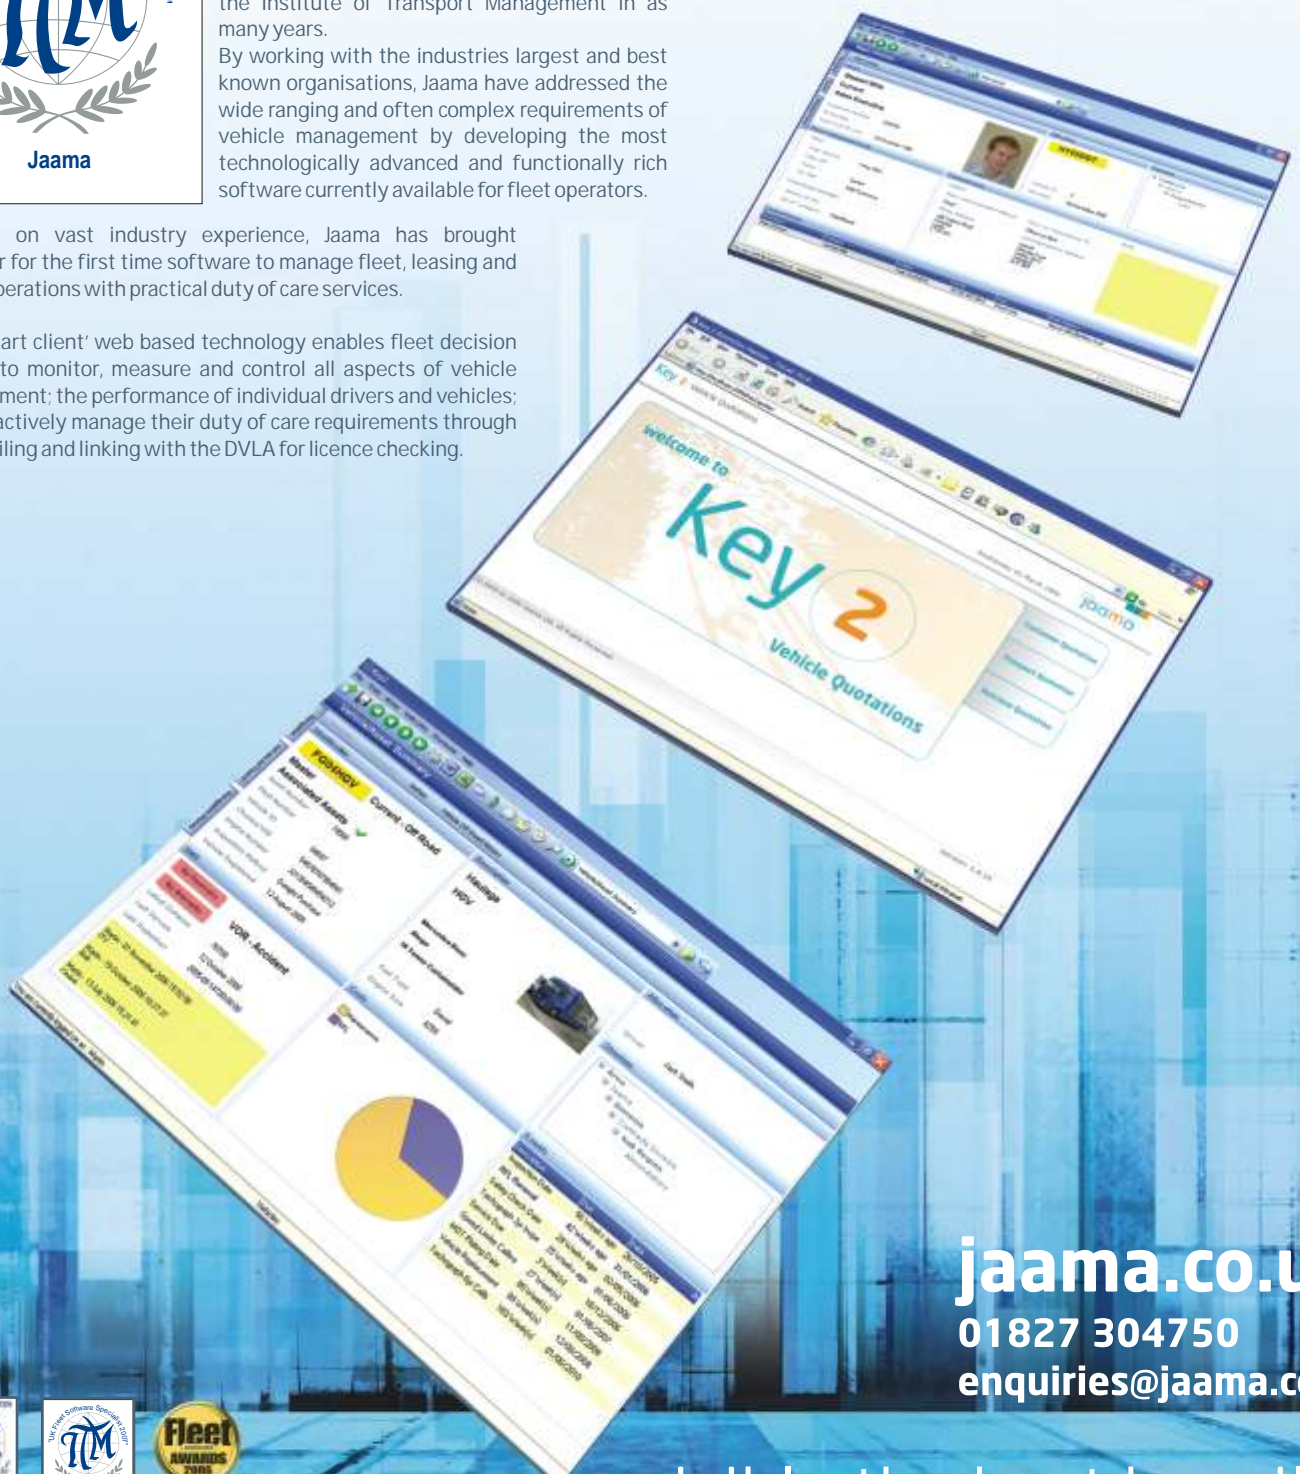

### Jaama win 'Fleet Software Award' for the 3rd year

An outstanding reputation for quality, value and innovation sees Jaama win their 3rd award from the Institute of Transport Management in as many years.

By working with the industries largest and best known organisations, Jaama have addressed the wide ranging and often complex requirements of vehicle management by developing the most technologically advanced and functionally rich software currently available for fleet operators.

Building on vast industry experience, Jaama has brought together for the first time software to manage fleet, leasing and rental operations with practical duty of care services.

This 'smart client' web based technology enables fleet decision makers to monitor, measure and control all aspects of vehicle management; the performance of individual drivers and vehicles; and proactively manage their duty of care requirements through risk profiling and linking with the DVLA for licence checking.
