

Fleet software and occupational road safety specialists

the number 1 choice

AWARD WINNERS APRIL 2005

INTRODUCING

Key2 vehicle management

uses the latest Microsoft .Net web services technology ensures you are not investing in older, obsolete technology

the worlds first Microsoft Smart Client vehicle management software functionally rich user interface with all the benefits of a web browser application

Oracle or SQL databases provide seamless integration with other business data/systems information entered once, stored once, then accessed throughout your business

uses established industry standard XML common data standards links your data to the DVLA, telematics systems, or any modern application/data provider without the need to run import/export routines

covering all aspects of owning, leasing, hiring, maintaining, repairing, running and disposing of vehicles cars, vans, commercial vehicles, plant and other asset related equipment

visibly the best system by miles

Jaama is a new breed technology company, passionate about the fleet industry and quietly revolutionising fleet management software. We don't announce new products until they are implemented in a live customer environment.

Key2 Vehicle Management is visibly the most advanced vehicle management system available and currently managing thousands of vehicles in a way no other system can.

To find out how our systems can help, put us to the test: ask our customers why they are delighted to recommend us.
